

BedCide™

Dairy Bedding Conditioner

The premium germ-killing bedding conditioner for your dairy cows

There is a battle going on every day in your cow's bedding. Moisture is harboring bacteria that are growing in number and just waiting for the opportunity to attack your cow's udders through their teats. The result is mastitis – lost production – lost profits.

Dairy operators now have a superior germ-fighting weapon with *BedCide*.

BedCide kills mastitis-causing bacteria!

Some bedding conditioners can only attempt to inhibit bacterial growth. *BedCide* has been developed with a special formulation of **Chlorine Dioxide** – the same broad spectrum germicide found in many premium teat dips!

Your cows need germ-fighting protection in their stalls – where they spend almost half their day. Now *BedCide*™ bedding conditioner will kill environmental bacteria when your cows are resting, before they can attack your cows.

BedCide absorbs more moisture than the competition!

Moisture can be the home and transportation for bacteria.

BedCide absorbs 370 percent more moisture than Sani-Bed™ and 550 percent more than Zorbisan™.

BedCide™

BedCide™

Dairy Bedding Conditioner

BedCide also provides these great benefits:

- **BedCide smells great** and is made with Eucalyptus and Yucca plant extracts. This helps reduce noxious ammonia odors found in the stall area.
- **BedCide repels flies** in the bedding area. Fewer flies around your cows provides a healthier, more comfortable environment.
- **BedCide extends life of bedding material** by reducing bacteria and moisture content.
- **BedCide accelerates conversion of manure to nitrogen** when manure from the bedding area is spread on fields.
- **BedCide is easy to use** and needs no special handling or equipment. It's easily and safely applied by hand.
- **BedCide is safe** for your cows, the environment and for you – but it's murder on mastitis-causing bacteria.
- **BedCide is a far better value than lime.** BedCide is more absorbant than lime and requires only a few ounces per stall compared to several pounds/kilograms of lime.

Now a safe, premium bedding conditioner for your cows helps you **save cows, save production and save profits.**
