

# Xpedia 90RX™ Xpedia 90TX™

BouMatic™

## Unsurpassed value and versatility in a parallel

*Now there's a high-efficiency  
parallel stall system specifically  
designed for the medium-sized dairy.*

**Xpedia** provides the medium sized dairy with quality construction and ease of installation. No more adapting a one-size-fits-all design to your dairy. Now there's a stall system specifically designed for your operation.

### **Xpedia 90RX™**

The Xpedia Reel Exit System is superior to conventional systems because it gently ushers cows from the stalls and allows stall reloading to begin faster. Most importantly, the exit reel addresses the cow at the brisket instead of the shoulder because many times shoulder contact can be uncomfortable for the cow. The cow can remain relaxed during the entire milking cycle.

How it works:

At the completion of milking, the exit reel begins its first 90° rotation allowing the cows to begin to move out of their stalls. At 90°, the reel slows giving the cows free access to the exit lane. During the final 90° rotation the reel gently ushers any lingering cows out of the stalls. The entrance gate can then be opened, and the reload process can begin.

Use manual controls or upgrade to a one-touch system.

*Reel rotation begins*

*Reel rotation slows*

*Reel ushers*

## Xpedia 90TX™

The Xpedia Tilt Exit System features extreme simplicity while being specifically designed to deliver cow comfort—two benefits not often found in the same system.

The distinctive angled brisket loop addresses cows of any size at the brisket, which allows for maximum cow comfort. Thanks to the tilt design, the Xpedia can be retrofitted into many existing low ceiling buildings thus reducing construction costs.

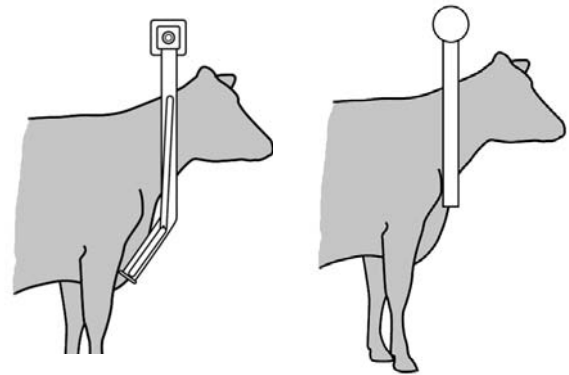

### The features that work best for you

#### Standard features:

- Stainless steel 10 gauge splash panel
- 10 gauge galvanized curbing
- Available on 28-inch centers

#### Optional features:

- Integrated stall splash panel and detachers
- Upgraded one-touch stall controls on the RX version
- Stainless steel integrated jetter curbing
