BOUMATIC INTRODUCES THE ALL NEW GLACIER VK SERIES PACKAGED CHILLER MILK COOLING SYSTEM

MADISON, WISCONSIN – BouMatic™, a global dairy equipment and chemical manufacturer, announces the introduction of the unrivaled, *Glacier™ VK Series Packaged Chiller*, an all-stainless steel milk cooling system with extreme efficiency in a modular, skid-mounted design.

"The *Glacier™ VK Series Package Chiller* is an innovative design concept that allows the cooling system to be sized to any dairy operation, yet it can grow as the dairy operation grows," said Troy Esser, BouMatic Refrigeration Product Manager.

"The modular design of the *Glacier™ VK Series* allows each unit to operate independently of others and each is set up with its own glycol pump," said Esser. "The modules have built-in control redundancy to provide stable, uninterrupted operation of the compressors for added security and peace of mind," he added.

Glacier™ VK Series modules come with close-coupled water-cooled or remote air-cooled condensers and they operate on environmentally friendly R507 refrigerant, which carries no federal phase-out date. *Glacier™ VK Series* units are designed to fit through a standard 32 inch doorway, yet they retain the large capacity and unrivaled cooling capacity of much larger cooling systems.

The *Glacier™ VK Series* utilizes a variable frequency drive control for its compressor, glycol pump and condenser fans for top efficiency and reduced compressor fatigue," said Esser. "This gives the system its increased cooling capacity," he added.

Additional features available on the *Glacier™ VK Series Packaged Chiller* include independent condenser circuits, a fast response expansion valve, a glycol pump for each circuit, compressor protection through a suction accumulator and a remote or skid-mount visual display.

Currently BouMatic is introducing several new products at major dairy and agricultural expositions worldwide, including the *Xcalibur™ 360EX*, BouMatic's newest rotary milking system, the *DualFlo™* swing over parlor milking system, *BlueMAX™*, a revolutionary new no-mix chloride dioxide teat dip, and *BedCide™*, a super absorbent, germ-fighting bedding conditioner for dairy cows.

BouMatic has dairy equipment and supply sales in over 40 countries, and employs over 400 people worldwide, with corporate offices in Madison, Wisconsin, USA and Remicourt, Belgium. For more information go to: www.boumatic.com
